

Risk assessment of *Ralstonia solanacearum* to fluazinam and evaluation of combinatory fungicides

Wenjun MU

Key Laboratory of Eco-environment and Leaf Tobacco Quality

Zhengzhou Tobacco Research Institute of CNTC

Oct, 12, 2021

Tobacco Bacterial Wilt

- Destructive soil-borne vascular disease
- *Ralstonia solanacearum*
- Chemical control: Antibiotics, Copper fungicides, Sulfur fungicides

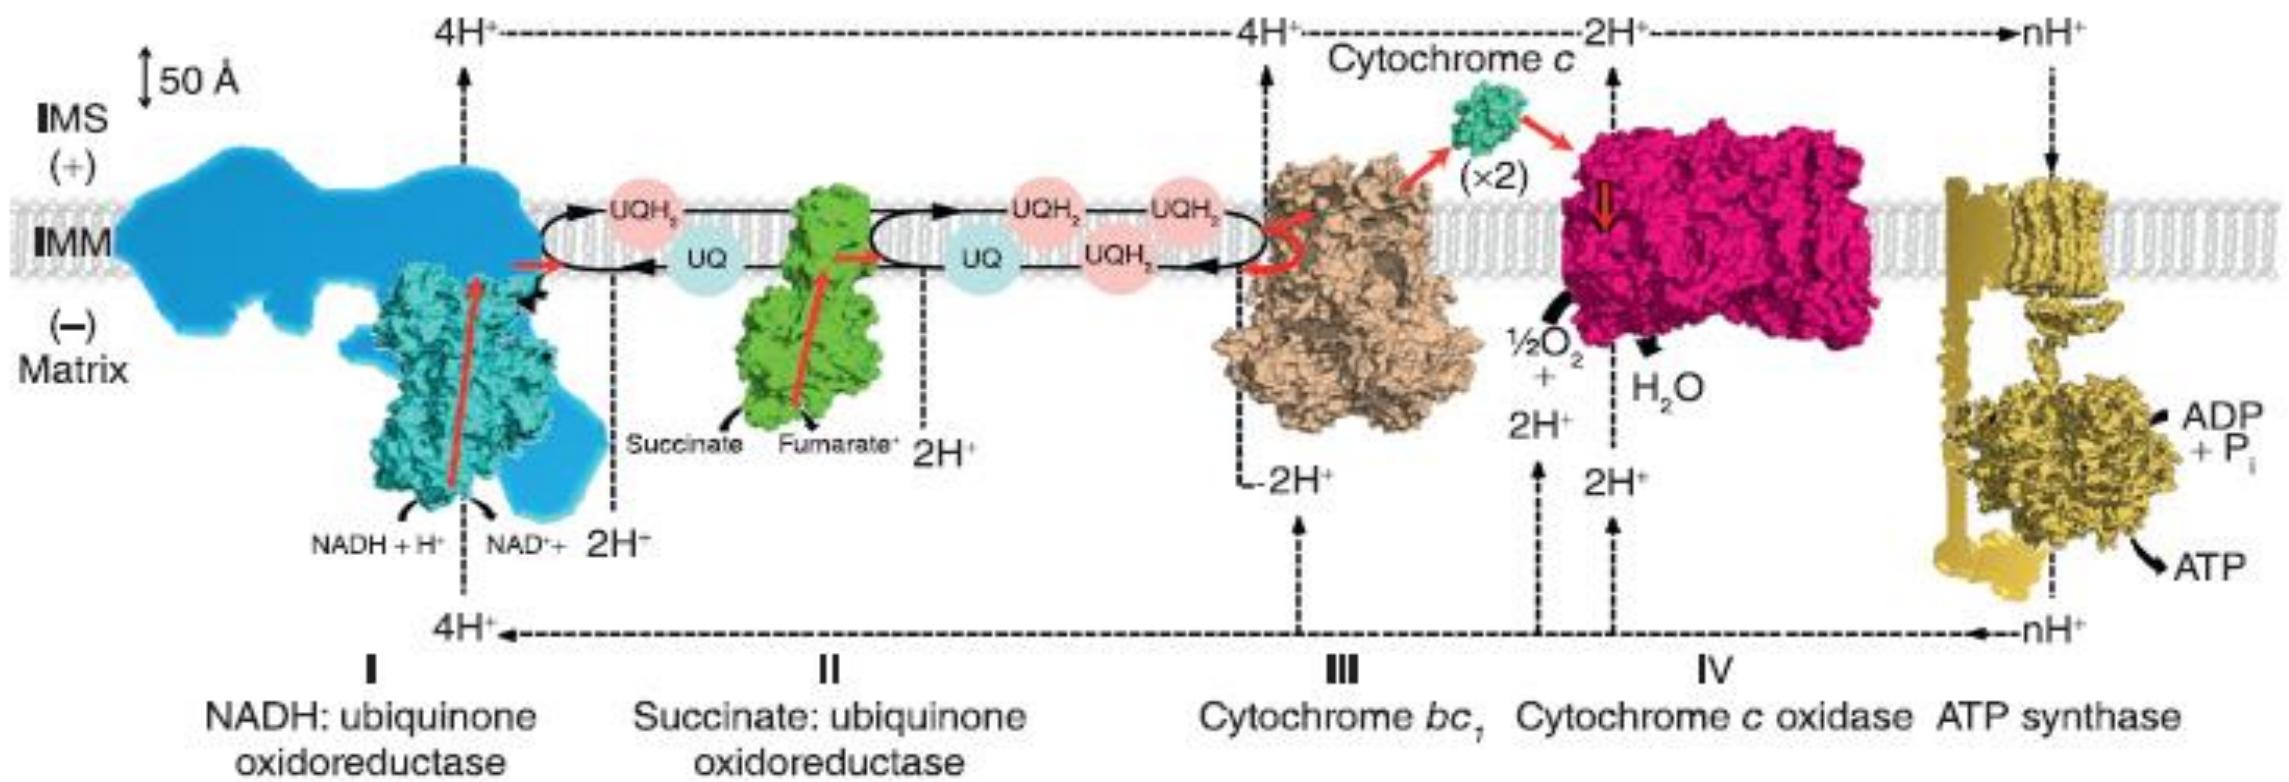

Fluazinam

Fungicide	Fluazinam
Chemical group	2,6-dinitro-Anilines
Company	Ishihara Co., LTD
Registration object	Pepper Blight, Potato late blight, Chinese cabbage clubroot
Mode of action	Protective fungicide
Toxicity	Low

Mechanism of action

Uncoupling of oxidative phosphorylation

NADH: ubiquinone
oxidoreductase

Succinate: ubiquinone
oxidoreductase

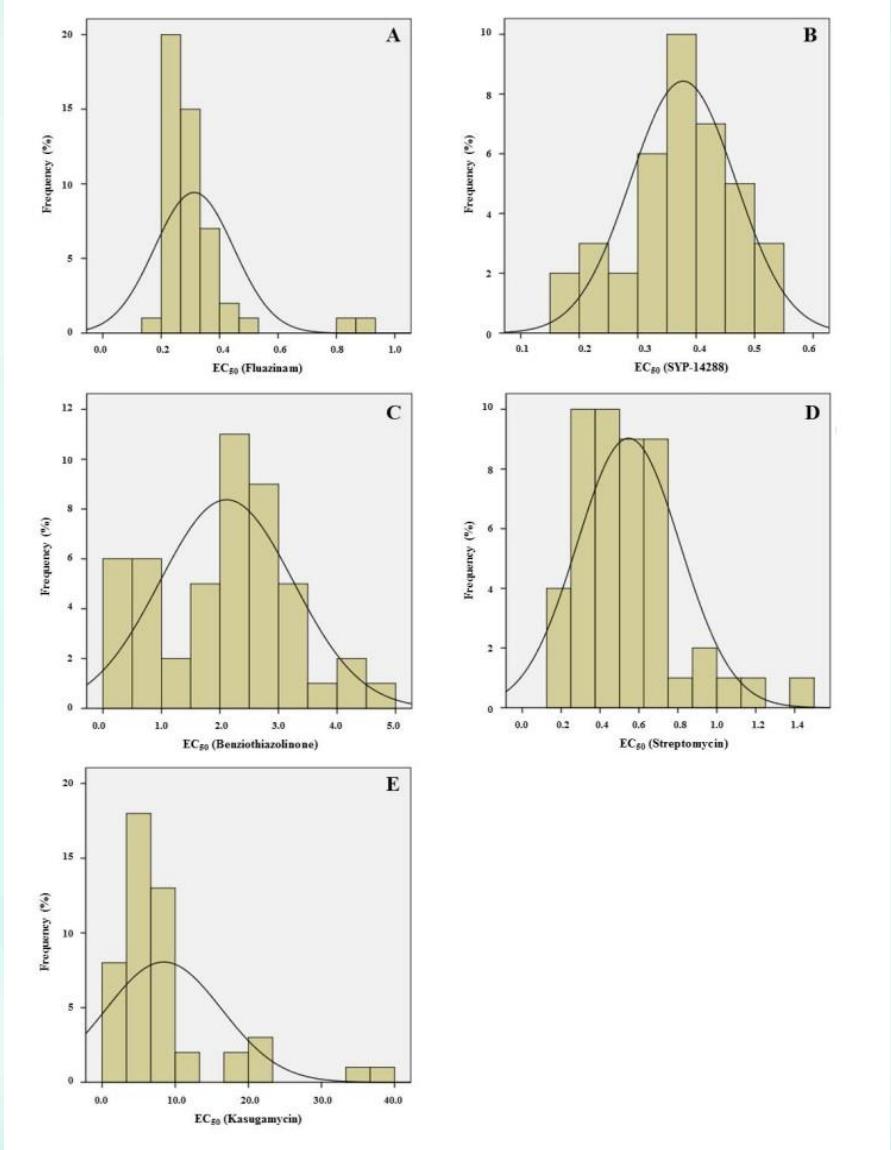

Cytochrome bc₁ Cytochrome c oxidase ATP synthase

Objective

I. Risk Assessment of *Ralstonia solanacearum* to fluazinam

II. Integrated fluazinam and five fungicides to control tobacco bacterial wilt

Baseline sensitivity

Fungicide	EC ₅₀ Range (μg/mL)	Average EC ₅₀ (μg/mL)
Fluazinam	0.147 1~0.890 4	0.305 0
SYP-14288	0.018 7~0.053 4	0.037 8
Benzoithiazolinone	0.099 5~4.825 3	2.429 9
Streptomycin	0.187 6~1.407 3	0.546 3
Kasugamycin	4.157 7~37.628 2	9.927 3

Cross-resistance

Cross-resistance was detected between fluazinam and the uncoupler fungicide SYP-14288, but not between fluazinam and kasugamycin, benzothiazolinone, streptomycin.

Conclusion

- The sensitivity baselines of the five fungicides to tobacco bacterial wilt were normal. The 15 mutants with different resistance levels had strong temperature adaptability and pathogenicity. The results of comprehensive evaluation showed that the resistance risk of tobacco bacterial wilt to fluazinam was moderate to high.
- The mixtures of fluazinam with benzothiazolinone, kasugamycin, nano sulfur at the ratio of 1:80, 1:80, 1:40 respectively had synergistic effects. The additive effect of fluazinam and nano-copper, nano-silver at the ratio of 80:1, 1:20 was the most obvious.

Thank you for your attention !
