

# NICOTINE PHARMACOKINETICS OF ELECTRONIC CIGARETTES

An updated analysis of pooled data from the literature

**Karin Jacobson**, Javier Martinez, Sylvain Larroque,  
Ian W. Jones, and Thilo Paschke

CORESTA SSPT 2021

# Introduction

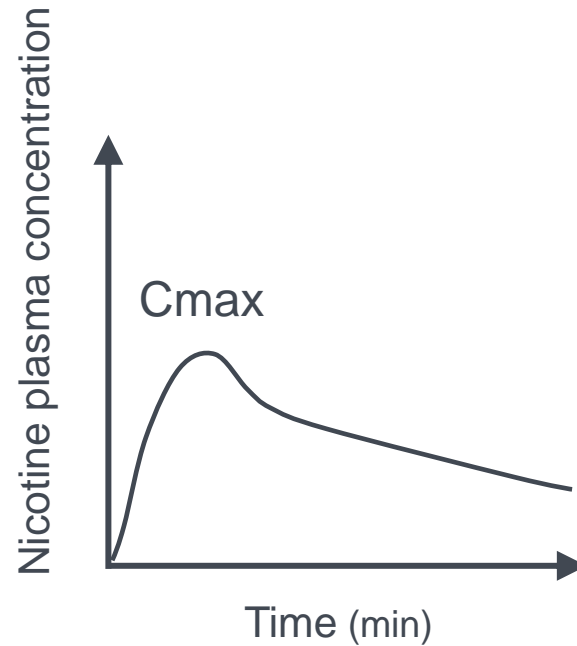

Maximum e-liquid  
nicotine concentration 20  
mg/ml

Is there a correlation between e-cigarette nicotine concentration and nicotine levels in the blood?

# Analysis of e-cigarette nicotine pharmacokinetics

E-cigarette studies

- E-cigarette device type
- User experience
- Puffing behavior

→ Jacobson, K., et al. (2021). *Toxicology Reports* 8: 84-95

→ Updated analysis – data March 2020 – July 2021

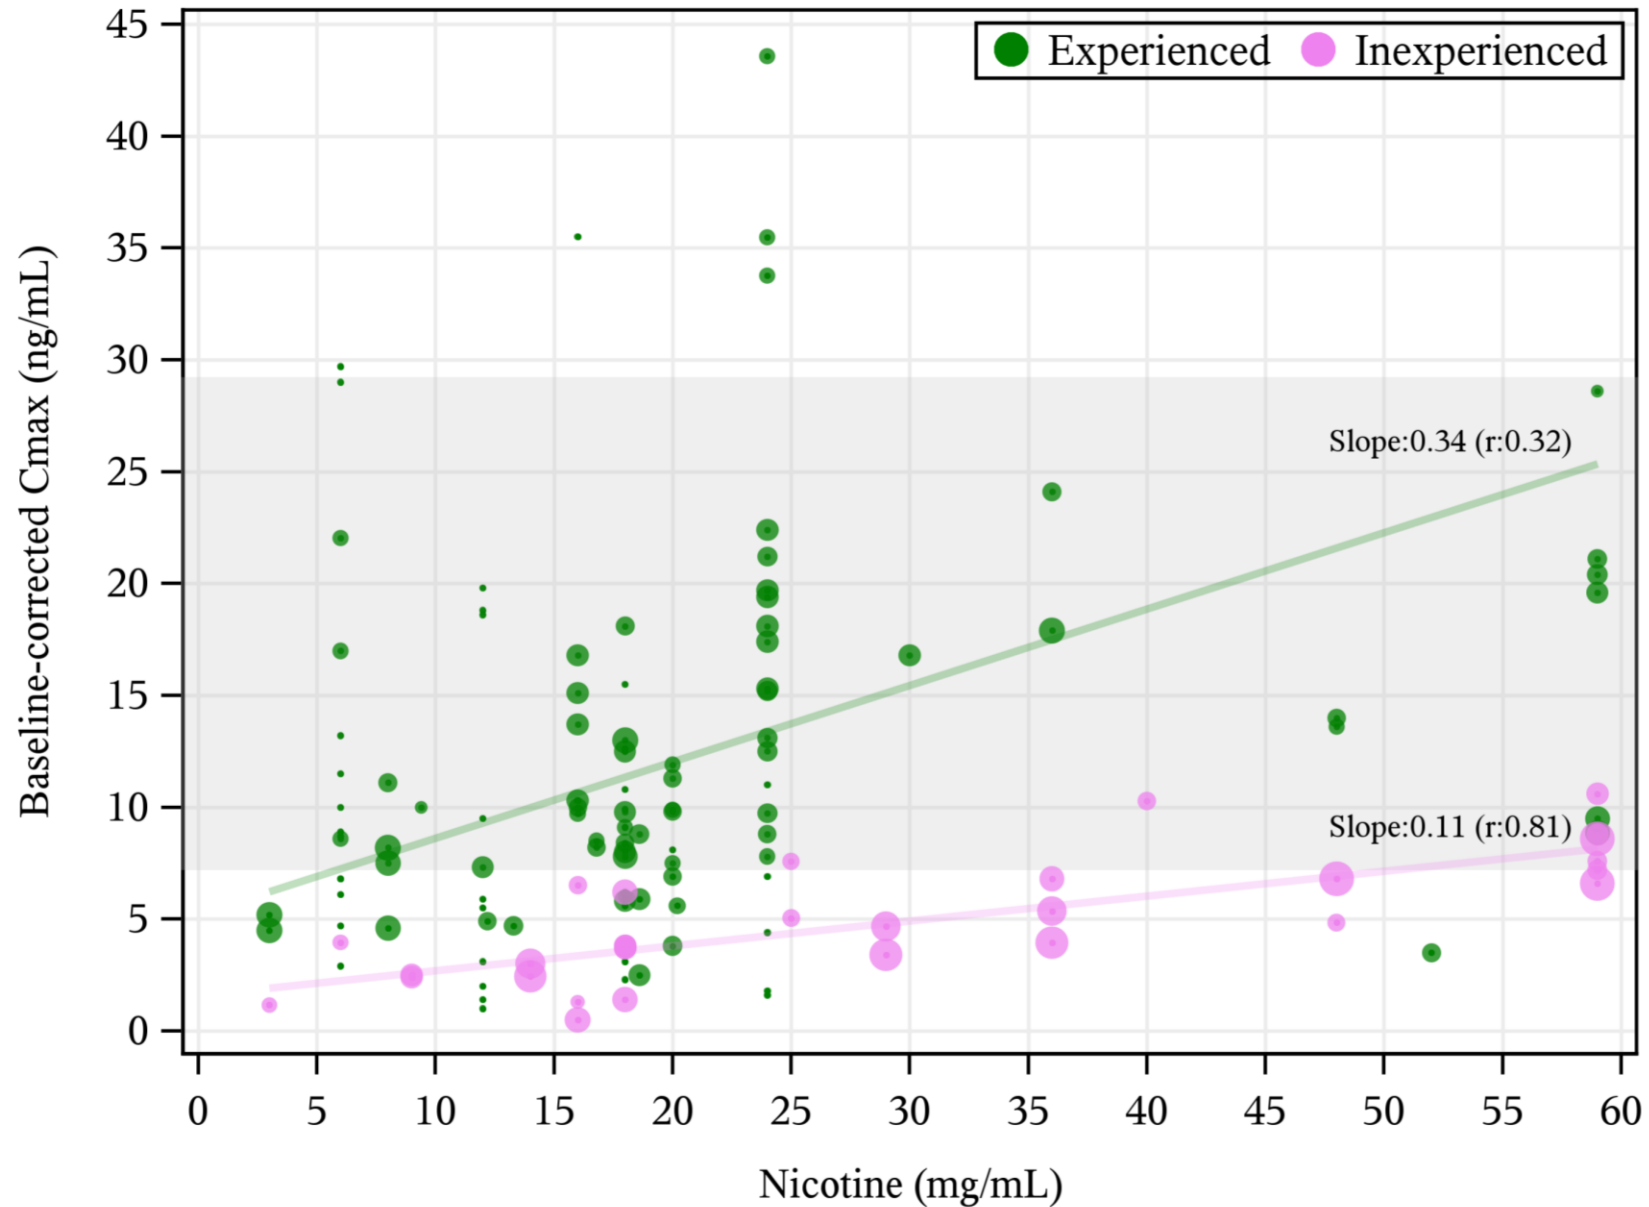

# Complete data set with wide distribution of Cmax

# Differences between e-cigarette device generations

# User experience can influence nicotine delivery

# Conclusions

C<sub>max</sub> cannot be predicted by the e-liquid nicotine concentration

Nicotine absorption is influenced by a combination of many factors
