

**HEATED TOBACCO PRODUCTS:  
A CORESTA WORKSHOP  
Paris, France - 26 March 2019**

The interest in new nicotine delivery products has seen a large increase over the last decade. Recently, among these products, those using heated tobacco technologies have come to the forefront of discussions within the scientific, health and regulatory communities. Studies have been published, but there are still different scientific opinions, based on different approaches. Therefore, further work remains to be conducted to provide better understanding of all issues, and robust data produced to assist to make science-based decisions in terms of devices, components and product use patterns.

Regarding Heated-Tobacco Products (HTP), also known as Tobacco-Heated, Heat-not-Burn or Non-Combusted Tobacco Products, an interest from many CORESTA members and non-Members is growing to embrace these new alternatives to conventional cigarettes. This is why CORESTA, six years after a similar situation with electronic cigarettes, which eventually led to the first vaping industry international standard, considered that it should capitalize on its global scientific expertise in helping with the understanding and characterization of these products, in cooperation with all interested and relevant stakeholders.

After an open-discussion held on the topic during the CORESTA Congress in Kunming, China, October 2018, a one-day workshop will be convened on March 26<sup>th</sup>, 2019, in Paris, France, to discuss a range of issues related to these products and to set up a road map for further CORESTA activities in this regard.

Details are available on the [CORESTA website](http://www.coresta.org) and registration open to all interested parties.

---

CORESTA, the Cooperation Centre for Scientific Research Relative to Tobacco, is an association founded in 1956 whose purpose is to promote international cooperation in scientific research relative to tobacco and its derived products. It organises yearly meetings at which results of studies conducted by its 24 working groups are reported and scientific papers are presented.

CORESTA is based in Paris, France. Its 150 member-organisations are headquartered in 36 countries, and represented in over 50 through their subsidiaries and affiliates.
