

# TSNA Method Development

Dr Michael Intorp  
CORESTA

Cooperation Center for Scientific Research Relative to Tobacco

FDA Center for Tobacco Products  
Scientific Workshop – Tobacco Product Analysis

30 – 31 July 2013

# CORESTA

## Special Analytes Sub-Group

### ❖ TSNA Work Program

- Propose practical and robust recommended methods for smoke analysis (CORESTA Recommended Methods, CRMs)
- Priority compounds identified as benzo[a]pyrene and four tobacco specific nitrosamines (TSNAs)
  - NNN, NNK, NAT and NAB

# CORESTA Special Analytes Sub-Group *Development of Recommended Methods*

## ❖ Approach used for the development of robust methods

- ✓ **Should involve a relatively large number of laboratories**
  - CORESTA well represents global expertise in this type of measurement
- ✓ **Should involve a wide range of product and design styles**
  - Range of blend styles
  - Range of tar yields
  - Manufactured in various global regions
- ✓ **Round-table discussions during development provide valuable insight into causes and ways to reduce inter-laboratory data variability**
- ✓ **Consensual and unanimous decisions on “standardisation”**

# Tobacco-Specific Nitrosamines (TSNAs) by GC-TEA between 1999 and 2005

- ❖ **Review of existing methods for cigarette smoke**
  - ✓ Two types of methods were identified (GC-TEA and LC-MSMS)
  - ✓ Insufficient laboratories for collaborative work using LC-MSMS
- ❖ **Joint experiments using GC-TEA method**
  - ✓ Several clean up procedures investigated and optimised
- ❖ **Investigation of GC-TEA method variability**
  - ✓ Collaborative study under ISO 3308 regime
  - ✓ 9 laboratories using 7 test cigarettes
  - ✓ Publication as CRM 63 in 2005

<i>Cigarette (ng/cig)</i>	<i>NNN Mean</i>	<i>r</i>	<i>R</i>	<i>R%</i>

F	52	9	23	44

## TSNA method development by LC-MS/MS between 2009 and 2012

- ❖ **Review of applied methods for TSNA in cigarette smoke**
  - Many laboratories have switched to the LC-MS/MS technique.
- ❖ **Joint experiments using LC-MS/MS**
  - Investigation of various methodological parameters e.g. calibration standards
- ❖ **Development of Recommended method**
  - Through collaborative study involving 20 laboratories from 12 countries using statistical procedures outlined in ISO 5725-2

## TSNA method development by LC-MS/MS between 2009 and 2012

- ❖ Cigarettes are smoked on a standard smoking machine. Mainstream smoke is trapped on a glass fiber filter pad.
- ❖ After addition of an internal standard, the total particulate matter collected on the glass fiber filter pad is extracted into 20 mL of 0.1M ammonium acetate solution using a shaker for 60 minutes.
- ❖ The extract is syringe filtered through a 0.45  $\mu\text{m}$  PTFE column directly into an auto sampler vial.
- ❖ The samples are subjected to reversed phase high performance liquid chromatography (HPLC) and quantified via tandem mass spectrometry (MS/MS).

## TSNA method development by LC-MS/MS between 2009 and 2012

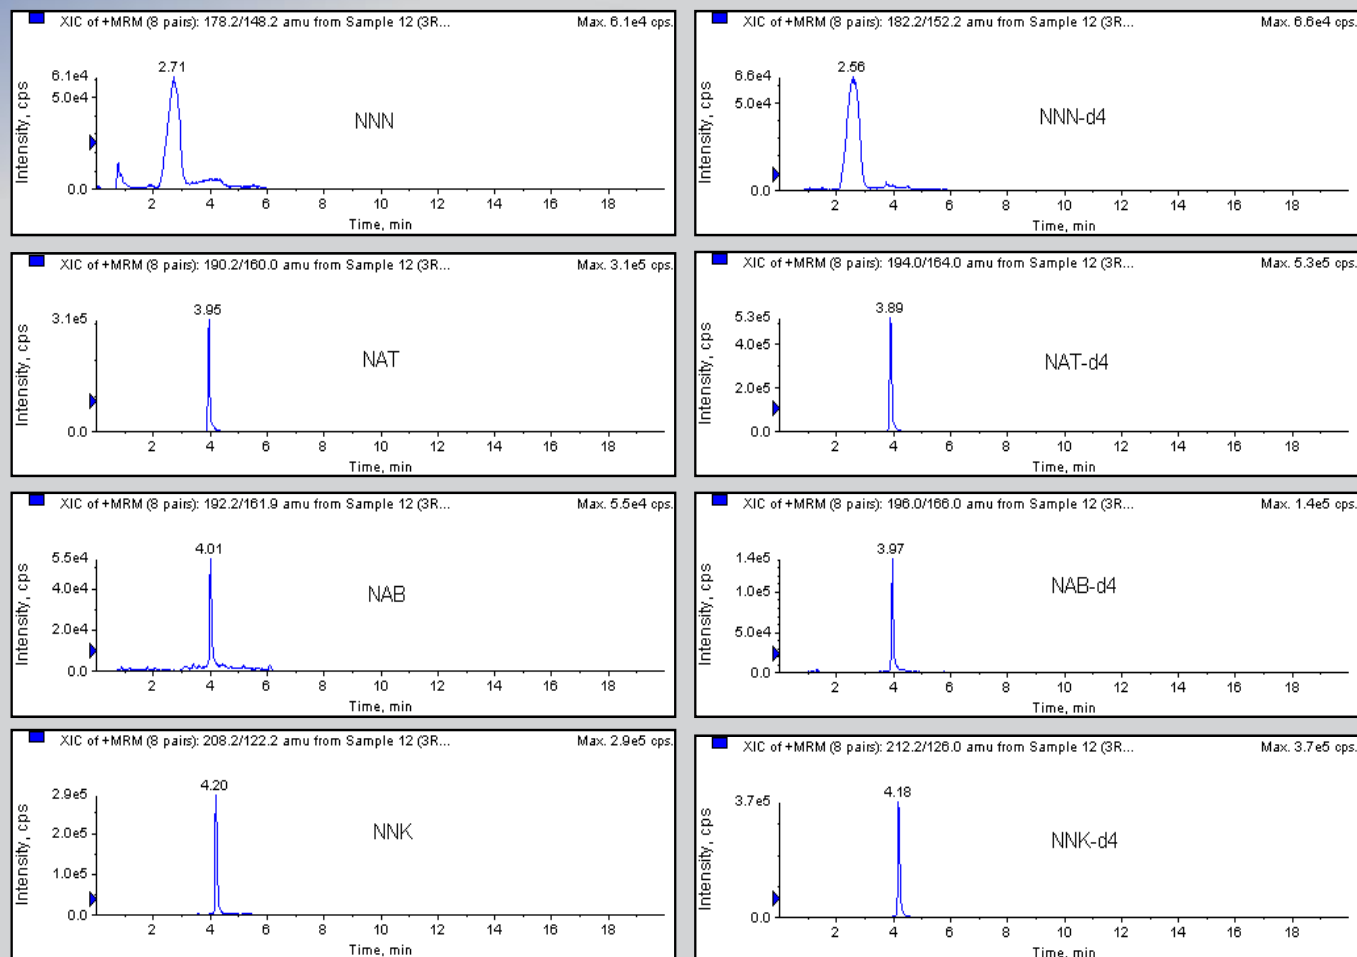

Compounds	Precursor ion (m/z)	Quantifier (m/z)	Qualifier (m/z)	DP* (V)	CE* (V)	CXP* (V)	Dwell time (m sec)
NNN	178	148	120	41	15	10	150
NAT	190	160	106	41	15	10	150

# Tobacco-Specific Nitrosamines - **NNK** R versus Mean yield from CRMs 63 & 75

# Tobacco-Specific Nitrosamines - **NNN** R versus Mean yield from CRMs 63 & 75

# Tobacco-Specific Nitrosamines Summary

- ❖ Collaborative Studies were conducted using GC-TEA and LC-MS/MS methodology.
- ❖ Both methods gave comparable results for variability but higher than for TNCO.
- ❖ Advantage of LC-MS/MS method is the significantly higher throughput.
- ❖ NNN-d4 and NNK-d4 are recommended for quantification to adjust for matrix effects.
- ❖ CRM 63 for GC-TEA method was published in 2005.
- ❖ CRM 75 for LC-MS/MS was published in 2012.
- ❖ Reproducibility under ISO and Canadian Intense regime was similar
- ❖ There were no significant differences between data obtained using either linear or rotary smoking engines
- ❖ The study from 2011 was published in Beiträge 2012.
- ❖ CRM 75 will be raised by CORESTA as a new work item within ISO (ISO 3308 smoking regime only)

# Conclusions & Achievements

## ❖ **Special Analytes Sub-Group**

- **Two CRMs have been developed for TSNAs.**
- **Experiences in method development were shared within the Sub-Group and made publicly available in a Beiträge publication.**
- **Round-table open discussions have provided valuable insight in method performance issues and technical limitations**
